Public Employees' Retirement Association of Colorado

Actuarial Valuation and Review

As of December 31, 2023

Health Care Trust Fund Denver Public Schools Health Care Trust Fund

This report has been prepared at the request of the Board of Trustees to assist in administering the Funds. The measurements shown in this actuarial valuation may not be applicable for other purposes.

Segal

June 6, 2024

The Board of Trustees
Public Employees' Retirement Association of Colorado
1301 Pennsylvania St.
Denver, CO 80203-2386

Dear Trustees:

We certify that the information contained in this report is accurate and fairly presents the actuarial position of the Health Care Trust Funds of the Public Employees' Retirement Association of Colorado (PERA) as of December 31, 2023.

All calculations have been made in conformity with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion the results presented also comply with Colorado Statutes, and, where applicable, the Internal Revenue Code, and ERISA. The undersigned are independent actuaries. All are Fellows or Associates of the Society of Actuaries and Members of the American Academy of Actuaries, and are experienced in performing valuations for large public retirement systems. The signing actuaries meet the Qualification Standards of the American Academy of Actuaries to rend the actuarial opinion herein.

Segal makes no representation or warranty as to the future status of the Plan and does not guarantee any particular result. This document does not constitute legal, tax, accounting or investment advice or create or imply a fiduciary relationship. PERA is encouraged to discuss any issues raised in this report with the Plan's legal, tax and other advisors before taking, or refraining from taking, any action.

OPEB FUNDING ACTUARIAL VALUATION – HEALTH CARE TRUST FUNDS

The primary purposes of the valuation report are to determine the adequacy of the current employer contribution rates, to describe the current financial condition of PERA, and to analyze changes in PERA's financial condition. Valuations are prepared annually, as of December 31 of each year, the last day of PERA's plan and fiscal year.

OPEB FINANCING OBJECTIVES

PERA maintains two pre-funded defined benefit retiree health care subsidy plans [i.e., Health Care Trust Fund (HCTF) and the Denver Public Schools Health Care Trust Fund (DPS HCTF)], classified as other postemployment benefit (OPEB) plans. Each OPEB plan is funded through PERA-affiliated employer contributions, allocated purchase of service dollars, and the investment earnings resulting from those contributions. The fixed contribution rate at which each PERA-affiliated employer contributes is determined by the Colorado General Assembly and defined within the statutes governing PERA.

PERA's OPEB plan funding policy (OPEB funding policy), as developed and maintained by the Board of Trustees (Board), is used to gauge the adequacy of the employer contributions. The purposes of this OPEB funding policy are to state the overall funding goals and annual actuarial metrics and to guide the PERA Board of Trustees (Board) when considering whether to pursue or support proposed contribution and benefit legislation related to the Health Care Trust Funds. The policy also includes a brief list of governance responsibilities regarding the commissioning, collection, and review of actuarial information, as described in the Board's Governance Manual.

PERA maintains five pre-funded hybrid defined benefit pension plans (i.e., State Division Trust Fund, School Division Trust Fund, Local Government Division Trust Fund, Judicial Division Trust Fund, and Denver Public Schools Division Trust Fund). On November 16, 2018, the Board approved an amended defined benefit pension plan funding policy (pension funding policy) with regard to these plans. The results of the pension funding actuarial valuation are inclued in a separate report.

PERA's OPEB funding policy is provided in Section 4, Exhibit III.

PROGRESS TOWARD REALIZATION OF OPEB FINANCING OBJECTIVES

The results indicate that for both Health Care Trust Funds the allocated employer contribution rates are sufficient to fund the normal cost for all members and each Health Care Trust Fund's unfunded accrued liability. The resulting amortization periods for each fund as of December 31, 2023, are shown in the following table:

Trust Fund	Effective Amortization Period
Health Care Trust Fund	8 years
DPS Health Care Trust Fund	N/A

The Board of Trustees June 6, 2024 Page 4

REPORTING CONSEQUENCES

Pursuant to the Governmental Accounting Standards Board Statement No. 74 (GASB 74), PERA is required to disclose certain actuarial information in its Annual Comprehensive Financial Report (Annual Report), including the Net OPEB Liability (NOL), the sensitivity of the NOL to changes in the discount rate, a schedule of changes in NOL, and a comparison of actual contributions to the Actuarially Determined Contribution (ADC). PERA's affiliated employers are required to comply with GASB Statement No. 75 (GASB 75), which also requires disclosure of certain actuarial information in their financial statements. This information is provided in a separate report.

BENEFIT PROVISIONS

The HCTF and DPS HCTF provide a subsidy for PERACare, PERA's voluntary health benefits program. C.R.S. § 24-51-1202 *et seq.* specifies the eligibility for enrollment in the health care plans offered by PERA and the amount of the premium subsidy. The law governing a benefit recipient's eligibility for the subsidy and the amount of the subsidy differs slightly depending under which benefit structure the benefits are calculated. All benefit recipients under the PERA benefit structure and all retirees under the DPS benefit structure are eligible for a premium subsidy, if enrolled in a health care plan under PERACare. Colorado State law provisions may be amended from time to time by the Colorado General Assembly. A summary of plan provisions is provided in Section 4, Exhibit II.

ASSUMPTIONS AND METHODS

The information and analysis used in selecting each assumption that has a significant effect on this actuarial valuation resulted from the *Public Employees' Retirement Association of Colorado Analysis of Actuarial Experience during the Period January 1, 2016 through December 31, 2019* and the *Public Employees' Retirement Association of Colorado – Health Care Trust Fund and Denver Public Schools Health Care Trust Fund Analysis of Actuarial Experience during the Period January 1, 2016 through December 31, 2019*. All recommended changes to the demographic and economic actuarial assumptions resulting from this study were reviewed and adopted by the Board at their November 20, 2020 meeting, to be effective for the December 31, 2020 actuarial valuation. As a result of the 2019 Asset Liability Study, concluded at the November 15, 2019 Board meeting, the Board reaffirmed the 7.25% assumed long-term rate of investment return effective as of January 1, 2020. This Board decision also was in alignment with the analysis provided in the 2020 Experience Analysis Study report.

In addition, effective January 19, 2018 and most recently revised, January 19, 2024, the OPEB funding policy recognizes a 30-year period to achieve 100% funding in parallel with the pension funding policy adopted and amended by the Board. Therefore, the UAAL as of December 31, 2017 is the initial legacy liability and is amortized over 30 years from December 31, 2017 (i.e., 24 years remaining as of December 31, 2023). Pursuant to the Board's funding policy, any growth (or reduction) in unfunded liabilities resulting from the initial legacy UAAL, is amortized over the same closed period. Thus, the 2023 contribution excess is amortized

The Board of Trustees June 6, 2024 Page 5

over a 24 year period, but the 2023 actuarial experience gain or loss, recognized as a new layer of UAAL, is amortized over a closed 30-year period. As of December 31, 2023, the funded status of the DPS HCTF is greater than 100%, thus, special rules apply for the determination of the actuarially determined contribution, details of which are provided in this report. A summary of the assumptions and methods applied in this valuation is provided in *Section 4, Exhibit I*.

As of December 31, 2023, the plan assets for the HCTF and Local Government Division Trust Fund reflect payments related to the disaffiliation of Tri-County Health Department as a PERA-affiliated employer, effective December 31, 2022. As of the December 31, 2023, year-end, PERA recognized two additions for funding actuarial valuation purposes: a \$24.000 million payment received on December 4, 2023, and a \$2.000 million receivable. The employer disaffiliation payment and receivable allocations to the HCTF and Local Government Division Trust Fund were \$1.033 million and \$24.967 million, respectively.

DATA

Member data for retired, active, and terminated vested participants was supplied as of December 31, 2023, by PERA. We have not subjected this data to any auditing procedures, but have examined the data for reasonableness and consistency with the prior year's data. Asset information was also supplied by PERA. That assistance is gratefully acknowledged.

Sincerely,

Segal

Purpose and basis

This report was prepared by Segal to present a funding valuation of the Health Care Trust Funds of the Public Employees' Retirement Association of Colorado (PERA) as of December 31, 2023. The funding valuation was performed to determine whether the assets and contribution rates are sufficient to provide the prescribed benefits. The measurements shown in this actuarial valuation may not be applicable for other purposes. In particular, the measures herein are not necessarily appropriate for assessing the sufficiency of PERA's Health Care Trust Fund assets to cover the estimated cost of settling the coordinating benefit obligations of those trusts. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law.

Certain disclosure information required by GASB 74 and GASB 75 as of December 31, 2023 for PERA is provided in a separate report.

The contribution requirements presented in this report are based on:

- The health care premium subsidy provisions, as administered by the PERA Board of Trustees;
- The characteristics of covered active members, terminated vested members, retired members and survivors as of December 31, 2023, provided by PERA;
- The assets of PERA's Health Care Trust Funds as of December 31, 2023, provided by PERA;
- Economic and other actuarial assumptions regarding health care trend rates, future salary increases, investment earnings, employee terminations, retirement, death, etc., as updated and approved by the Board, as of the November 20, 2020 Board meeting, first effective for the December 31, 2020 actuarial valuation. See additional detail in the Actuarial Assumptions section of the report on page 62; and
- The OPEB funding policy adopted by the PERA Board of Trustees, effective January 19, 2018, and most recently revised, January 19, 2024.

Valuation highlights - Health Care Trust Fund

- Segal strongly recommends an actuarial funding method that targets 100% funding of the actuarial accrued liability. Generally, this implies payments that are ultimately at least enough to cover normal cost, interest on the unfunded actuarial accrued liability and a portion of the principal balance. The OPEB funding policy adopted by PERA meets this standard.
- The employer statutory contribution rate for the plan year beginning January 1, 2025 is equal to 1.02% of salary for employers. After recognizing the net employer normal cost rate of 0.15% of salary, the remaining basic contribution amounts to 0.87% of salary. Contributions at this level will amortize the unfunded actuarial accrued liability of \$678,305,200 over 8 years, assuming the aggregate payroll increases by 3.00% per year.
- 3. The actuarially determined contribution for the plan year beginning January 1, 2025 is equal to 0.57% of salary for employers. The Unfunded Actuarial Accrued Liability as of December 31, 2017 is the initial legacy liability and is amortized over a remaining period of 24 years. Pursuant to the Board's OPEB funding policy, any growth (or reduction) in unfunded liabilities resulting from the initial legacy UAAL, is amortized over the same closed period. Thus, the 2023 contribution excess also is amortized over a 24 year period, but the 2023 actuarial experience gain or loss, recognized as a new layer of UAAL, is amortized over a closed 30-year period.
- 4. Actual employer contributions made during the plan year ending December 31, 2023 were \$112,930,652, which is 145% of the actuarially determined contribution. In the prior plan year, actual contributions were \$103,818,309, which is 128% of the prior year actuarially determined contribution.
- 5. Actuarial assumptions were updated as shown in the Actuarial Assumptions section of the report on page 62. The updated assumptions increased the accrued liability by \$14.4 million.
- 6. The funded ratio based on the actuarial value of assets over the actuarial accrued liability as of December 31, 2023 is 48.4%, compared to 43.4% as of December 31, 2022. This ratio is a measure of funding status and its history is a measure of funded progress. These measurements are not necessarily appropriate for assessing the sufficiency of the Plan's assets to cover the estimated cost of settling the Plan's benefit obligation or the need for or the amount of future contributions.
- For the year ended December 31, 2023, PERA's total fund annualized rate return on a market value basis was reported to be 13.4%. For the same period, Segal determined specifically for the HCTF, the asset return on a market value basis was 13.21%. After gradual recognition of investment gains and losses under the actuarial smoothing method, the actuarial rate of return was 5.91%. This represents an experience loss when compared to the assumed rate of 7.25%. As of December 31, 2023, the actuarial value of assets of \$635.9 million represented 103.9% of the market value of \$611.9 million.
- 8. The portion of deferred investment gains and losses recognized during the calculation of the December 31, 2023 actuarial value of assets contributed a loss of \$7.9 million.

- 9. As of December 31, 2023, the plan assets for the HCTF and Local Government Division Trust Fund reflect payments related to the disaffiliation of Tri-County Health Department as a PERA-affiliated employer, effective December 31, 2022. As of the December 31, 2023, year-end, PERA recognized two additions for funding actuarial valuation purposes: a \$24.000 million payment received on December 4, 2023, and a \$2.000 million receivable. The employer disaffiliation payment and receivable allocations to the HCTF and Local Government Division Trust Fund were \$1.033 million and \$24.967 million, respectively.
- 10. The term "Safety Officer" is used throughout this report to better describe the expanded definition of the term "State Trooper". The change from "State Trooper" to the broader term "Safety Officer", mirrors the language recently adopted within all PERA publications and communications.

Valuation highlights – Denver Public Schools Health Care Trust Fund

- 1. Segal strongly recommends an actuarial funding method that targets 100% funding of the actuarial accrued liability. Generally, this implies payments that are ultimately at least enough to cover normal cost, interest on the unfunded actuarial accrued liability and a portion of the principal balance. The OPEB funding policy adopted by PERA meets this standard.
- 2. The employer statutory contribution rate for the plan year beginning January 1, 2025 is equal to 1.02% of salary for employers. After recognizing the net employer normal cost rate of 0.12% of salary, the remaining basic contribution amounts to 0.90% of salary.
- 3. The actuarially determined contribution for the plan year beginning January 1, 2025 is equal to 0.12% of salary for employers. As noted in item 6, below, the funded status is now just over 110% and pursuant to the Board's OPEB funding policy, the ADC is equal to the Normal Cost until such time as the funded ratio equal or exceeds 120%. At that time, the ADC shall be equal to the Normal Cost less an amount equal to 15 year amortization of the portion of the negative UAAL above the 120% funded ratio.
- 4. Actual employer contributions made during the plan year ending December 31, 2023 were \$9,445,162, which is 440% of the actuarially determined contribution. In the prior plan year, actual contributions were \$8,744,273 which is 308% of the prior year actuarially determined contribution.
- 5. Actuarial assumptions were updated as shown in the Actuarial Assumptions section of the report on page 62. The updated assumptions increased the accrued liability by \$1.3 million.
- 6. The funded ratio based on the actuarial value of assets over the actuarial accrued liability as of December 31, 2023 is 110.4%, compared to 97.4% as of December 31, 2022. This ratio is a measure of funding status and its history is a measure of funded progress. These measurements are not necessarily appropriate for assessing the sufficiency of the Plan's assets to cover the estimated cost of settling the Plan's benefit obligation or the need for or the amount of future contributions.
- 7. For the year ended December 31, 2023, PERA's total fund annualized rate return on a market value basis was reported to be 13.4%. For the same period, Segal determined specifically for the DPS HCTF, the asset return on a market value basis was 13.15%. After gradual recognition of investment gains and losses under the actuarial smoothing method, the actuarial rate of return was 6.10%. This represents an experience loss when compared to the assumed rate of 7.25%. As of December 31, 2023, the actuarial value of assets of \$67.1 million represented 103.7% of the market value of \$64.7 million.
- The portion of deferred investment gains and losses recognized during the calculation of the December 31, 2023 actuarial value of assets contributed a loss of \$0.7 million.

Summary of key valuation results for Health Care Trust Fund

		2023	2022
Demographic data for	Number of retirees and survivors	56,252	56,458
Plan year ending	Number of terminated vested members	37,651	36,759
December 31:	Number of active members	197,922	191,392
	Total payroll supplied by PERA	\$10,656,972,686	\$9,671,062,130
	Average payroll supplied by PERA	\$53,844	\$50,530

Important information about actuarial valuations

An actuarial valuation is a budgeting tool with respect to the financing of future projected obligations of an OPEB plan. It is an estimated forecast – the actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.

In order to prepare a valuation, Segal relies on a number of input items. These include:

Plan of benefits	Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. For example, a plan may provide health benefits to post-65 retirees that coordinates with Medicare. If so, changes in the Medicare law or administration may change the plan's costs without any change in the terms of the plan itself. It is important for PERA to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.
Member data	An actuarial valuation for a plan is based on data provided to the actuary by the plan. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is not necessary to have perfect data for an actuarial valuation: the valuation is an estimated forecast, not a prediction. The uncertainties in other factors are such that even perfect data does not produce a "perfect" result. Notwithstanding the above, it is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.
Assets	The valuation is based on the fair value of assets as of the valuation date. The assets were based on financial statements as provided by PERA. Throughout this report, the term "fair value" is synonymous with the term "market value."
Models	Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprised of both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuaries.
	The results are also based on models for cost projections developed by Segal actuaries and programmers. The client team customizes and validates the models, and reviews the results, under the supervision of the responsible actuary.
	Our claims costs assumptions are based on proprietary modeling software as well as models that were developed by others. These models generate per capita claims cost calculations that are used in our valuation software. Our Health Technical Services Unit, comprised of actuaries and programmers, is responsible for the initial development and maintenance of our health models. They are also responsible for testing models that we

purchase from other vendors for reasonableness. The client team inputs the paid claims, enrollments, plan provisions and assumptions into these models and reviews the results for reasonableness, under the supervision of the responsible actuary.

Actuarial assumptions

In preparing an actuarial valuation, Segal starts by developing a forecast of the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. To determine the future costs of benefits, Segal collects claims, premiums, and enrollment data in order to establish a baseline cost for the valuation measurement, and then develops short- and long-term health care cost trend rates to project increases in costs in future years. This forecast also requires actuarial assumptions as to the probability of death, disability, withdrawal, and retirement of each participant for each year, as well as forecasts of the plan's benefits for each of those events. The forecasted benefits are then discounted to a present value, typically based on an estimate of the rate of return that will be achieved on the plan's assets or, if there are no assets, a rate of return based on a yield or index rate for 20-year, tax-exempt general obligation municipal bonds with an average rating of AA/Aa or higher (or equivalent quality on another rating scale). All of these factors are uncertain and unknowable. Thus, there will be a range of reasonable assumptions, and the results may vary materially based on which assumptions the actuary selects within that range. That is, there is no right answer (except with hindsight). It is important for any user of an actuarial valuation to understand and accept this constraint. The actuarial model necessarily uses approximations and estimates that may lead to significant changes in our results but will have no impact on the actual cost of the plan. In addition, the actuarial assumptions may change over time, and while this can have a significant impact on the reported results, it does not mean that the previous assumptions or results were unreasonable or wrong.

The user of Segal's actuarial valuation (or other actuarial calculations) should keep the following in mind:

The actuarial valuation is prepared for use by the PERA and PERA-affiliated employers of the HCTF and DPS HCTF. It includes information for compliance with accounting standards and for the plan's auditor. Segal is not responsible for the use or misuse of its report, particularly by any other party.

If the PERA is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised, so that we can evaluate it.

An actuarial valuation is a measurement at a specific date – it is not a prediction of a plan's future financial condition. Accordingly, Segal did not perform an analysis of the potential range of financial measurements, except where otherwise noted. The actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.

Sections of this report include actuarial results that are unrounded, but that does not imply precision.

Critical events for a plan include, but are not limited to, decisions about changes in benefits and contributions. The basis for such decisions needs to consider many factors such as the risk of changes in plan enrollment, emerging claims experience, health care trend, and investment losses, not just the current valuation results.

Segal does not provide investment, legal, accounting, or tax advice. Segal's valuation is based on our understanding of applicable guidance in these areas and of the plan's provisions, but they may be subject to alternative interpretations. The PERA Board should look to their other advisors for expertise in these areas.

While Segal maintains extensive quality assurance procedures, an actuarial valuation involves complex computer models and numerous inputs. In the event that an inaccuracy is discovered after presentation of Segal's valuation, Segal may revise that valuation or make an appropriate adjustment in the next valuation.

Segal's report shall be deemed to be final and accepted by the PERA Board upon delivery and review. PERA Board should notify Segal immediately of any questions or concerns about the final content.

As Segal has no discretionary authority with respect to the management or assets of the Plan, it is not a fiduciary in its capacity as actuaries and consultants with respect to the Plan.

Member data

The Actuarial Valuation and Review considers the number and demographic characteristics of covered members, including active members, terminated vested members, retirees and beneficiaries.

This section presents a summary of significant statistical data on these member groups.

More detailed information for this valuation year and the preceding valuation can be found in Section 3.

Health Care Trust Fund Member Population: 2014 – 2023

As of December 31	Active Members	Active Members Eligible for Medicare ¹	Terminated Vested Members	Retirees and Survivors	Total Membership	Ratio of Retirees and Survivors to Actives
2014	187,336	N/A	22,278	54,076	263,690	0.29
2015	188,040	N/A	23,777	55,092	266,909	0.29

2023	328,855	11,565,570	11,894,425	4,279,646	36%

Financial information

OPEB plan funding anticipates that, over the long term, both contributions (less administrative expenses) and investment earnings (less investment fees) will be needed to cover benefit payments. Plan assets change as a result of the net impact of these income and expense components.

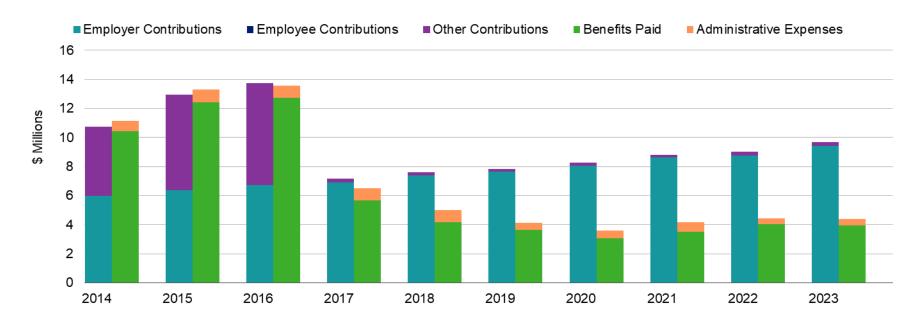

Additional financial information, including a summary of these transactions for the valuation year, is presented in Section 3.

Comparison of Contributions With Benefits Paid For Years Ended December 31, 2014 – 2023 For Health Care Trust Fund

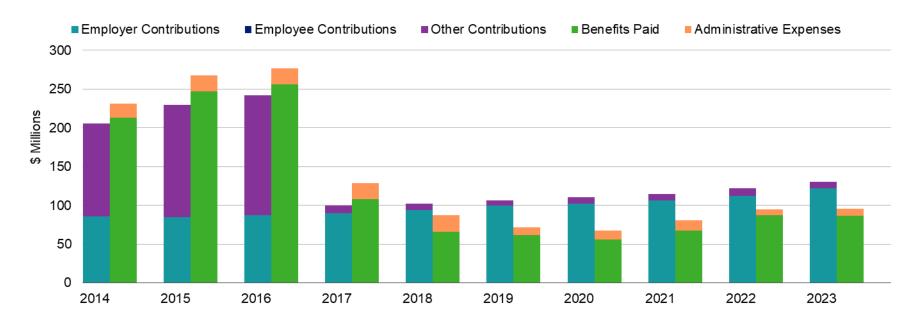

Financial information (continued)

Comparison of Contributions With Benefits Paid For Years Ended December 31, 2014 – 2023 Total For All Health Care Trust Funds

Financial information (continued)

It is desirable to have level and predictable plan costs from one year to the next. For this reason, the Board has approved an asset valuation method that gradually adjusts to market value. Under this valuation method, the full value of market fluctuations is not recognized in a single year and, as a result, the asset value and the plan costs are more stable. The amount of the adjustment to recognize market value is treated as income, which may be positive or negative. Realized and unrealized gains and losses are treated equally and, therefore, the sale of assets has no immediate effect on the actuarial value.

Health Care Trust Fund Determination of Actuarial Value of Assets For Year Ended December 31, 2023 And December 31, 2022

				2023		2022
1.	Market value of assets available for benefits			\$611,911,149		\$512,703,881
2.	Calculation of unrecognized return ¹	Original Amount ²	% Not Recognized		% Not Recognized

4.	Actuarial value as a percent of market value: (3) ÷ (1)			103.7%		111.3%

¹ Recognition at 25% per year over four years.

² Total return minus expected return on a market value basis.

Financial information (continued)

Both the actuarial value and market value of assets, when compared to actuarial accrued liabilities, are representations of PERA's financial status. As investment gains and losses are gradually taken into account, the actuarial value of assets tracks the market value of assets. The actuarial asset value is significant because the Plan's liabilities are compared to these assets to determine what portion, if any, remains unfunded. Amortization of the unfunded actuarial accrued liability is an important element in determining the actuarially determined contributions.

Total of All Health Care Trust Funds Actuarial Value of Assets vs. Market Value of Assets As of December 31, 2014 – 2023

Actuarial experience

To calculate any actuarially determined contribution, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year actual experience is measured against the assumptions. If overall experience is more favorable than anticipated (an actuarial gain), any contribution requirement will decrease from the previous year. On the other hand, any contribution requirement will increase if overall actuarial experience is less favorable than expected (an actuarial loss).

Taking account of experience gains or losses in one year without making a change in assumptions reflects the belief that the single years' experience was a short-term development and that, over the long term, experience will return to the original assumptions. For contribution requirements to remain stable, assumptions should approximate experience.

If assumptions are changed, the contribution requirement is adjusted to take into account a change in experience anticipated for all future years.

The total gain is \$28.2 million, which includes a loss from investments of \$(8.6) million and net gains from all other sources of \$36.8 million. The net experience variation from individual sources other than investments was 2.67% of the actuarial accrued liability. A discussion of the major components of the actuarial experience is on the following pages.

Actuarial Experience For Year Ended December 31, 2023

		Health Care Trust Fund	DPS Health Care Trust Fund
1.	Net gain/(loss) from investments ¹	\$(7,878,044)	\$(699,453)
2.	Net gain/(loss) from administrative expenses	(5,289,585)	(318,774)
3.	Net gain/(loss) from demographic and other experience	<u>40,865,109</u>	<u>1,482,968</u>
4.	Net experience gain/(loss): 1 + 2 + 3	\$27,697,480	\$464,741

¹ Details on next page.

Investment experience

A major component of projected asset growth is the assumed rate of return. The assumed return should represent the expected long-term rate of return, based on PERA's investment policy. The market value annualized rate of return on a total fund basis was 13.4% with a 13.21% return calculated for the total Health Care Trust Fund assets for the year ended December 31, 2023.

For valuation purposes, the assumed rate of return on the actuarial value of assets is 7.25%. The actual rate of return on an actuarial basis for the 2023 plan year was 5.92%. Since the actuarial return for the year was less than the assumed return, PERA experienced an actuarial loss during the year ended December 31, 2023 with regard to its investments.

Investment Experience – Total of Health Care Trust Funds

			Year Ended December 31, 2023		nded 31, 2022
		Market Value	Actuarial Value	Market Value	Actuarial Value
1.	Value assets at the beginning of year	\$564,939,326	\$629,844,487	\$615,701,859	\$560,861,547
2.	Contributions during the plan year	129,367,358	129,367,358	121,872,185	121,872,185
3.	Contributions receivable ¹	1,032,767	1,032,767	0	0

11.	Actuarial gain/(loss): 6 – 10	<u>\$34,650,810</u>	<u>\$(8,577,497)</u>	<u>\$(123,404,555)</u>	<u>\$316,840</u>

¹ Disaffiliation payments for Tri-County Health Department (TCHD).

² Adjusted to not include interest on the disaffiliation payments as they were made after the plan year-end following the effective date of the disaffiliation.

Demographic experience and administrative expenses

There are other differences between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- Retirement experience (earlier or later than projected),
- The number of disability retirements (more or fewer than projected),
- Mortality (more or fewer deaths than projected), and lapse (current retirees dropping coverage),
- The extent of turnover among participants,
- · New members, and
- Administrative expenses.

The net gain from this experience for the year ended December 31, 2023 amounted to \$36,739,718 which is 2.7% of the actuarial accrued liability.

Gains/(Losses) Due to Demographic Experience and Administrative Expenses For The Year Ended December 31, 2023 (\$ In Millions)

	Health Care Trust Fund	DPS Health Care Trust Fund	Total
Age and service retirements	\$20.9	\$0.8	\$21.7
Disability retirements	0.5	0.0	0.5
Deaths and lapses	9.5	0.4	9.9
Withdrawals	(2.9)	(0.1)	(3.0)
New members	(2.2)	(0.2)	(2.4)
Administrative expenses and other	<u>9.8</u>	<u>0.3</u>	<u>10.1</u>
Total gain/(loss)	\$35.6	\$1.2	\$36.8

Demographic experience and administrative expenses (continued)

An additional source of gain or loss that is sepearely identified and amortized over a period equal to the remaining years of the legacy UAAL amortization is the gain or loss due to contribution excess or deficiency.

Contribution Excess Or Deficiency For The Year Ended December 31, 2023

		Health Care Trust Fund	DPS Health Care Trust Fund
1.	Actuarially determined employer contribution rate for 2023:

(c)	Purchased service/disaffiliation payments	1,032,767	<u>0</u>
(d)	Total: 4(a) + 4(b) - 4(c)	\$119,685,584	\$9,681,774
5.	Contribution (excess)/deficiency, adjusted for interest: (3c – 4d) * 1.03625	\$(43,408,184)	\$(7,808,751)

Changes in the actuarial accrued liability

The total actuarial accrued liability for the HCTF and DPS HCTF as of December 31, 2023 is \$1,375,024,461, a decrease of \$1,812,828, or 0.1% decrease, from the actuarial accrued liability as of the prior valuation date. The change in liability is due to interest, accumulation and payment of benefits, assumption changes, and actuarial experience (as discussed in the previous subsection).

Actuarial assumptions

The assumption changes reflected in this report are:

- Per capita health care costs in effect as of the December 31, 2023 valuation date for those PERACare enrollees under the PERA Benefit Structure who are expected to be age 65 and older and are not eligible for premium-free Medicare Part A benefits have been updated to reflect the costs for the 2024 plan year.
- The health care cost trend rates applicable to health plan premiums were revised to reflect the current expectation of future increases in those premiums.
- The Medicare health care plan election rate assumptions were updated effective as of the December 31, 2023, valuation date based on an experience analysis of recent data.
- The following table shows the change in the Unfunded Actuarial Accrued Liability (UAAL), the Actuarially Determined Contribution (ADC), and the amortization period as a result of the change in methods and assumptions described above:

Change in UAAL			Change in
Plan	(\$ in thousands)	Change in ADC	Amortization Period
HCTF	14,372	0.01%	None
DPS HCTF	1,335	0.01%	None

• These changes increased the total actuarial accrued liability by \$15.7 million and increased the total normal cost by \$23.2 thousand.

Details on actuarial assumptions and methods are in Section 4, Exhibit I.

Plan provisions

- Effective January 1, 2024, Kaiser Permanente Medicare Advantage HMO had the following benefit modifications that had no net impact on rates:
 - In-home support 8-hours of non-medical in-home support each month has been added
 - Out-of-pocket maximum decrease from \$4,700 to \$4,000 per individual per year
 - Optical allowance modify from \$150 every 2 years to \$150 every year
 - Hearing aid allowance increase from \$500/ear every 3 years to \$1,000/ear every 3 years
 - Part D prescriptions modify tier 3 and 4 from a \$60 and \$75 copay to a \$80 and \$100 copay. Also modify generic 90-day mail-order prescriptions from 2 x copay to a \$0 copay

As noted above and described in plan provisions, the benefit provides a premium subsidy that is equal to the minimum of the total plan premium or the service-based subsidy. The premium updates for Medicare Advantage Option #2 that are in effect for this valuation, are lower than that of the service-based subsidy and thus result in a lower plan provided subsidy and resulting liability. Due to the carrier change and lower premiums, the details of the plan provisions including total premiums used to determine the plan subsidy are now included as part of plan provisions and are subject to corresponding healthcare cost trend and morbidity assumptions for future years as applicable and to statutory maximum levels.

Members who select Medicare Advantage Option #2 will have fully subsidized health premiums (medical and pharmacy only) while the premium is currently and/or projected to be lower than the service related subsidy calculation. Where plan premiums exceed the service related subsidy, members will pay the excess amounts.

Members that do not qualify for premium-free Medicare Part A, continue to pay contributions in excess of the defined dollar subsidy at the same level as fully-eligible Medicare members and, for members under the PERA Benefit Structure, the plan is liable for the implicit "No Part A" subsidy based upon the excess costs of Part B only premium rates over the standard Medicare premium for the plan selected.

A summary of plan provisions is in Section 4, Exhibit II.

Cash flow

Cash flow is the difference between contributions and benefit payments, refunds, and expenses. Negative cash flow indicates that the payments made from the Plan exceed contributions made to the Plan.

Health Care Trust Fund History of Cash Flow: 2014 – 2023

Year Ended December 31	Contributions and Other Additions ¹	Benefit Payments And Other Deductions	Administrative Expenses	Total Disbursements	Net Cash Flow for the Year ²	Market Value of Assets	Net Cash Flow as Percent of Market Value

7.	Unfunded/(overfunded) actuarial accrued liability at end of year: 5 + 6e	\$678,305,200	\$(6,295,566)	\$672,009,634

¹ Adjusted to not include interest on the disaffiliation payment as it was made after the plan year-end following the effective date of the disaffiliation.

Statutory employer contributions

The statutory employer contribution rates for each Health Care Trust Fund are shown in the following table:

Health Care Turst Fund	Employer Contribution Rate
Health Care Trust Fund	1.02%
DPS Health Care Trust Fund	1.02%

The tables on the following pages show the development of the normal cost rate, the UAAL payment, amortization period and the actuarially determined contribution rate for each Health Care Trust Fund based on the OPEB funding policy.

Actuarially determined contribution

For each Plan, the amount of the actuarially determined contribution is comprised of an employer normal cost payment and a payment on the unfunded/(overfunded) actuarial accrued liability. For plans with an (overfunded) actuarial accrued liability, and a funded ratio of less than or equal to 120%, the actuarially determined contribution is equal to the normal cost. If the funded ratio exceeds 120%, the actuarially determined contribution shall be equal to the normal cost less an amount equal to a 15 year amortization of the portion of the negative UAAL above the 120% funded ratio. This total amount is divided by the projected payroll for active members to determine the actuarially determined contribution.

PERA's OPEB funding policy is included in Exhibit III. The methodology used to calculate the actuarially determined contributions for the OPEB plans is based on closed (layered) amortization periods of 30 years. The length of the amortization periods are as follows:

- The December 31, 2017 legacy UAAL is being amortized over a closed 30-year period (24 years remaining as of December 31, 2023).
- Contribution deficiencies/excesses are amortized over the remaining period of the legacy UAAL.
- Experience gains and losses are amortized over 30 years from the date of the valuation.
- Assumption changes are amortized over 30 years from the date of the valuation.
- Other changes in the UAAL are amortized over 30 years from the date of the valuation.
- Benefit changes are amortized over a period determined by the Board to represent the anticipated duration of the payment of the change, not to exceed 25 years.

The contribution requirements as of December 31, 2023 are based on the data previously described, the actuarial assumptions and Plan provisions described in *Section 4*, including all changes affecting future costs adopted at the time of the actuarial valuation, actuarial gains and losses, and changes in the actuarial assumptions.

Contribution rates for the year ending December 31, 2025 are derived from the results of the December 31, 2023, annual actuarial valuation.

Actuarially determined contribution (continued)

Schedule of Computed Employer Contribution Rates for the 2025 Plan Year Based Upon the Results of the December 31, 2023 Actuarial Funding Valuation

Item	Health Care Trust Fund	DPS Health Care Trust Fund
Normal Cost		
Service retirement benefits	0.13%	0.10%
Disability retirement benefits	0.00%	0.00%
Survivor benefits	0.00%	0.00%
Termination withdrawals	0.02%	0.02%
Total normal cost	0.15%	0.12%
Member contributions	0.00%	0.00%
Employer normal cost	0.15%	0.12%
Percentage available to amortize unfunded actuarial accrued liabilities	0.87%	0.90%
Equivalent single amortization period	8 years	N/A ¹
Total employer contribution rate for actuarially funded benefits	0.57%	0.12%

¹ For Funds with a negative UAAL, the ADC is equal to the Normal Cost until such time as the funded ratio equals or exceeds 120%.

¹ The underlying calculations involve more precision than what is presented and the rounded numbers shown may not add as a result.

² For Funds with an (overfunded) actuarial accrued liability, the ADC is equal to the Normal Cost until such time as the funded ratio equals or exceeds 120%.

Reconciliation of actuarially determined contribution

The chart below details the changes in the actuarially determined contributions from the prior valuation to the current year's valuation.

Reconciliation of Actuarially Determined Contribution

	Item	Health Care Trust Fund	DPS Health Care Trust Fund
1.	Prior valuation	0.65%	0.16%
2.	Increases/(decreases) due to:		
	Effect of change in amortization period	0.00%	0.00%
	Effect of change in payroll and normal cost	(0.04%)	(0.01%)
	Effect of contributions (more)/less than actuarially determined contribution	(0.03%)	(0.05%)
	 Effect of gains and losses on accrued liability and administrative expenses 	(0.02%)	0.01%
	Effect of investment (gain)/loss	0.00%	0.00%
	Effect of plan changes	0.00%	0.00%
	Effect of change in actuarial assumptions and methods	0.01%	0.01%
	Net effect of other changes	0.00%	<u>0.00%</u>
	Total change	(0.08%)	(0.04%)
3.	Current valuation: 1 + 2	0.57%	0.12% ¹
4.	Statutory employer contribution rate	1.02%	1.02%
5.	Margin available [contribution sufficiency/(deficiency)]: 4 – 3	<u>0.45%</u>	<u>0.90%</u>

¹The ADC is equal to the Normal Cost until such time as the funded ratio equals or exceeds 120%.

History of employer contributions

Critical information to assess the funding progress is the historical comparison of the actuarially determined contribution to the actual contributions. A history of the most recent years of contributions is shown below.

Health Care Trust Fund History of Employer Contributions: 2014 – 2023

Actuarially Determined Employer Contribution (ADC) Actual Employer Contribution Plan Year **Ended** Percentage **PERA Payroll Retiree Drug Percentage** Percent December 31 **Amount** of Payroll **Allocations** Subsidy **Total** of Payroll Contributed 2014 \$95,189,820 1.32% \$79,625,680 \$0 \$79,625,680 1.10% 83.6% 2015 1.15% 1.05% 86.083.768 78.462.738 0 78.462.738 91.1% 80,825,145 2016 84,114,123 1.09% 80,825,145 0 1.05% 96.1% 2017 85,614,624 1.08% 83,172,633 0 83,172,633 1.05% 97.1% 2018 94,078,152 1.12% 86,559,491 0 86,559,491 1.03% 92.0% 2019 98,061,896 1.11% 92,011,162 0 92,011,162 1.04% 93.8% 0.97% 2020 87,184,752 94,634,186 0 94,634,186 1.05% 108.5% 2021 83,107,303 0.89% 97,974,004 97,974,004 1.05% 117.9% 0 103,818,309 2022 0.84% 1.07% 127.8% 81,236,922 103,818,309 0 2023 77,795,901 0.73% 112,930,652¹ 0 $112,930,652^{1}$ 1.06% 145.2%

¹ Contributions for 2023 do not include the disaffiliation payments totaling \$1.033 million for the Tri-County Health Department.

Additional information

The other critical piece of information regarding PERA's financial status is the funded ratio. This ratio compares the actuarial value of assets to the actuarial accrued liabilities of each Health Care Trust Fund. High ratios indicate a well-funded plan with assets sufficient to cover the plan's actuarial accrued liabilities. Lower ratios may indicate recent changes to benefit structures, funding of the plan below actuarial requirements, poor asset performance, or a variety of other factors. The chart below shows the funded ratio calculated using the actuarial value of assets.

Health Care Trust Fund Schedule of Funding Progress

As of December 31	Actuarial Value of Assets (AVA)	Actuarial Accrued Liability (AAL)	Unfunded Actuarial Accrued Liability (UAAL)	Funded Ratio	Annual Covered Payroll	UAAL as a % of Covered Payroll

Total of Health Care Trust Funds Funded Ratio as of December 31

Schedule of funded liabilities by type (formerly known as the Solvency Test)

The Actuarial Accrued Liability represents the present value of benefits earned, calculated using the Health Care Trust Funds' actuarial cost method. The Actuarial Value of Assets reflects the financial resources available to liquidate the liability. The portion of the liability covered by assets reflects the extent to which accumulated plan assets are sufficient to pay future benefits, and is shown for liabilities associated with member contributions, pensioner liabilities, and other liabilities. The Government Finance Officers Association (GFOA) recommends that the OPEB funding policy aim to achieve a funded ratio of 100 percent.

7.	Actuarial value of assets	\$635,905,562	\$67,109,265	\$703,014,827
8.	Unfunded/(overfunded) actuarial accrued liability at end of year: 6 - 7	\$678,305,200	\$(6,295,566)	\$672,009,634

Actuarial balance sheet

An Actuarial Balance Sheet gives an overview of the Health Care Trust Funds' funding. First, the amount and timing of all future payments that will be made by the Health Care Trust Funds for current participants is determined. Then these payments are discounted at the valuation interest rate to the date of the valuation, thereby determining the present value, referred to as the "liability" of the Health Care Trust Funds.

Second, this liability is compared to the assets. The "assets" for this purpose include the net amount of assets already accumulated by the Health Care Trust Funds, the present value of future employer normal cost contributions, and the present value of future employer amortization payments for the unfunded actuarial accrued liability.

Actuarial Balance Sheet

	Health Care	DPS Health Care Trust	
	Trust Fund	Fund	Total
Liabilities:			
 Present value of benefits for retirees and beneficiaries 	\$910,875,758	\$36,291,776	\$947,167,534
 Present value of benefits for terminated vested members 	45,887,882	2,864,332	48,752,214
 Present value of benefits for active members 	472,277,980	29,915,413	502,193,393
Total liabilities	\$1,429,041,620	\$69,071,521	\$1,498,113,141

¹The underlying calculations involve more precision than what is presented and the rounded numbers shown may not add as a result.

Exhibit I: Statement of actuarial assumptions, methods and models

Rationale for assumptions

The information and analysis used in selecting each assumption that has a significant effect on this actuarial valuation resulted from the Public Employees' Retirement Association of Colorado – Health Care Trust Fund and Denver Public Schools Health Care Trust Fund Analysis of Actuarial Experience during the Period January 1, 2016, through December 31, 2019 dated November 4, 2020.

The revised assumptions proposed in this report were adopted by the Board on November 20, 2020, effective beginning with the December 31, 2020, actuarial valuation and measurement date. Based on professional judgment, no assumption changes are warranted at this time.

As a result of the 2019 Asset Liability Study, concluded at the November 15, 2019 Board meeting, the Board reaffirmed the 7.25% assumed long-term rate of investment return effective as of January 1, 2020.

Long-term rate of return

7.25%, net of investment expenses

Price inflation assumption

2.30%

Wage inflation assumption

3.00%

Real wage inflation

0.70%

Actuarial cost method

Entry Age Actuarial Cost Method. Entry Age is the age at date of employment or, if date is unknown, current age minus years of service. Normal Cost and Actuarial Accrued Liability are calculated on an individual basis and are allocated by salary, with Normal Cost determined using the plan of benefits applicable to each member.

Asset valuation method

The actuarial value of assets is determined using the "four-year smoothed value" asset valuation method. Under this method, investment gains and losses are recognized in equal portions over a four-year period. Investment gains and losses are determined by comparing the actual return on market value for a given period to the anticipated earnings over the same period if the market value at the beginning of the period, contributions, benefit payments, and administrative expenses during the period earned the expected rate of return for the portion of the period that each was expected to be including in, or exclude from, plan assets. The expected rate of return for this purpose is equal to the investment rate of return assumption at the beginning of the period. The resulting actuarial value of assets is not constrained to fall within a corridor around the market value of assets.

Spouse coverage

For current retirees under the PERA benefit structure with a Joint and Survivor pension based on data provided for each record, we have assumed that the surviving eligible beneficiary would continue to receive the explicit subsidy upon the retiree's death. For future retirees under the PERA benefit Structure, we have assumed that 60% of male retirees and 35% of female retirees with an explicit subsidy will have a surviving spouse who continues the benefit.

For current retirees, we have valued an implicit subsidy spouse liability based on data provided for each record. For future retirees with an implicit subsidy liability, we have assumed that 5% of employees of the State, School, Local Government, Judicial, and DPS Division employees (under the PERA benefit structure) have enrolled a spouse who also will have an implicit subsidy liability.

Withdrawal assumption

For all but the Judicial Division, it is assumed that 35% of the vested members who terminate elect to withdraw their contributions and matching employer contributions while the remaining 65% elect to leave their contributions in the plan in order to be eligible for a benefit at their retirement date. For the Judicial Division, it is assumed that 100% of the vested members who terminate elect to leave their contributions in the plan in order to be eligible for a benefit at their retirement date. Current active members assumed to terminate service and leave their contributions in the plan in order to be eligible for a benefit at their retirement date are assumed to retire with a reduced benefit, if applicable, at an age based upon benefit structure and/or service as shown in the following table:

Assumed Age of Initial Benefit Receipt	Benefit Structure and/or Service
50	PERA Benefit Structure Members (excluding Safety Officers) with 25 or More Years of Service
50	Safety Officers with 20 or More Years of Service
55	PERA Benefit Structure Members (excluding Safety Officers) with 20–25 Years of Service
60	PERA Benefit Structure Members with Less than 20 Years of Service
60	DPS Benefit Structure Members

Inactive members

It is assumed that 100% of current and future inactive members who terminated employment with less than five years of service are ineligible to receive a pension benefit and will elect to withdraw their contributions.

Death before retirement

For State and Local Government Divisions (other than Safety Officers), pre-retirement mortality rates are based upon the PubG-2010 Employee table with generational projection using scale MP-2019.

For State and Local Government Divisions (Safety Officers), pre-retirement mortality rates are based upon the PubS-2010 Employee table with generational projection using scale MP-2019.

For School and DPS Divisions, pre-retirement mortality rates are based upon the PubT-2010 Employee table with generational projection using scale MP-2019.

For the Judicial Division, pre-retirement mortality rates are based upon the PubG-2010(A) Above-Median Employee table with generational projection using scale MP-2019.

All mortality tables referred to above are the headcount-weighted tables.

Death after retirement

For State and Local Government Divisions (other than Safety Officers), post-retirement non-disabled retiree mortality rates are based upon the PubG-2010 Healthy Retiree table with adjustments for credibility and gender. For males, the adjustments are 94% of the rates prior to age 80 and 90% of the rates for ages 80 and older, projected generationally using scale MP-2019. For females, the adjustments are 87% of the rates prior to age 80 and 107% of the rates for ages 80 and older, with generational projection using scale MP-2019.

For State and Local Government Divisions (Safety Officers), the post-retirement non-disabled retiree mortality table used is the unadjusted PubS-2010 Healthy Retiree table, with generational projection using scale MP-2019.

For the School and DPS Divisions, the post-retirement non-disabled retiree mortality table used is the PubT-2010 Healthy Retiree table with adjustments for credibility and gender. For males, the adjustments are 112% of the rates prior to age 80 and 94% of the rates for ages 80 and older, projected generationally using scale MP-2019. For females, the adjustments are 83% of the rates prior to age 80 and 106% of the rates for ages 80 and older, with generational projection using scale MP-2019.

For the Judicial Division, the post-retirement non-disabled retiree mortality table is the unadjusted PubG-2010(A) Above-Median Healthy Retiree table, with generational projection using scale MP-2019.

For all Divisions, the post-retirement non-disabled beneficiary mortality table is the Pub-2010 Contingent Survivor table with adjustments for credibility and gender. For males, the adjustments are 97% of the rates for all ages, with generational projection using scale MP-2019. For females, the adjustments are 105% of the rates for all ages, with generational projection using scale MP-2019.

For all Divisions except Safety Officers, the disabled mortality rates are based upon the PubNS-2010 Disabled Retiree table using 99% of rates for all ages with generational projection using Scale MP-2019.

For Safety Officers in the State and Local Government Divisions, the disabled mortality rates are based upon the unadjusted PubS-2010 Disabled Retiree table with generational projection using scale MP-2019.

All mortality tables referred to above are the headcount-weighted tables.

Salary increases

Representative values of the assumed annual rates of future salary increases are shown in the following tables:

Health care participation rates (PERA benefit structure)

Current PERACare participants of the State, School, Local Government, and Judicial Divisions with a PERA benefit structure are assumed to maintain their current health care benefit elections in perpetuity. For active members retiring directly from the State, School, Local Government, and Judicial Divisions with a PERA benefit structure, the following participation rates are assumed:

Attained Age(s) at Retirement	Percent (%) Electing Health Care Coverages
15-48	20
49-50	25
51-52	35
53-57	40
58-71	45
72+	55

For eligible terminated vested members of the State, School, Local Government, or Judicial Divisions with a PERA benefit structure, 20% are assumed to elect health care coverage upon commencement of their monthly pension benefit.

For spousal participation, actual census data and current plan elections of current benefit recipients are used. For spouses of eligible terminated vested members and future retirees of the State, School, Local Government, or Judicial Divisions with a PERA benefit structure, 60% of males and 35% of females are assumed to elect coverage for their spouse. The age difference between female retirees and covered male spouses is assumed to be 1 year (male older) and the age difference between male retirees and female spouses is assumed to be 3 years (male older).

PERA benefit structure assumptions specific to the "No Part A" subsidy

Under Colorado Revised Statute 24-51-1206(4), the premiums charged to a PERACare enrollee who is age 65 or older and who is not eligible for premium-free benefits under Medicare Part A shall be no greater than the premium charged to a PERACare enrollee eligible for premium-free benefits under Medicare Part A with the same plan option, coverage level, and service credit. As a result, an additional, "No Part A" subsidy is paid under the PERA benefit structure on behalf of those PERACare enrollees who are age 65 or older and are not eligible for premium-free benefits under Medicare Part A.

For those current PERACare enrollees who are age 65 and older, the premium-free Medicare Part A eligibility status is provided by PERA and is assumed to be maintained in perpetuity. For current PERACare enrollees not yet age 65, hired prior to April 1, 1986, and not assumed eligible for premium-free Medicare Part A coverage through their spouse, and for those active employees hired prior to

April 1, 1986, the following percentage of PERACare enrollees are assumed to not qualify for premium-free Medicare Part A benefits; thus qualifying for the "No Part A" subsidy from the PERA benefit structure:

Hire Age	Percent (%) Qualifying for "No Part A" Subsidy
0-24	17
25-29	11
30+	4

Of those PERACare enrollees assumed to not qualify for premium-free Medicare Part A benefits and receive the "No Part A" subsidy from the PERA benefit structure, 5% are assumed to cover a spouse.

The qualifying assumptions are based upon the experience of current, Medicare eligible, PERACare enrollees. Date of hire and hire age are estimated based upon service and date of retirement for current benefit recipients, or service and the valuation date for active members. As a result, those who are re-employed or transfer to another PERA employer may have accumulated the required quarters of Medicare-covered employment.

95% of PERACare enrollees receiving health care benefits as a result of disability retirement are assumed to qualify for premium-free Medicare Part A. 100% of eligible terminated vested members enrolled in PERACare are assumed to obtain the 40 or more quarters of Medicare-covered employment required for premium-free Medicare Part A coverage as a result of their subsequent employment.

Currently, the additional plan costs or premiums associated with those PERACare enrollees not eligible for premium-free Medicare Part A coverage are less, in aggregate, than the costs of PERA paying the Medicare Part A premium on their behalf. However, future increases in the additional costs or premiums associated with PERACare enrollees not eligible for premium-free Medicare Part A coverage may, in aggregate, exceed the Medicare Part A premium. As a result, it is assumed PERA will make the decision to pay the Medicare Part A premium, it is assumed PERA's decision will be based upon the level of additional plan costs, include the premium penalties associated with late enrollment in Medicare Part A, and be made when the additional cost, averaged across all plans, for all PERACare enrollees, exceeds the Medicare Part A premium. This funding valuation assumes this will not occur.

PERA benefit structure health care plan election rates

Medicare plan elections for future retirees as well as for current, Pre-Medicare retirees of the State, School, Local Government, Judicial, and Denver Public Schools Divisions with a PERA benefit structure who are not eligible for premium-free Medicare Part A, are assumed as follows:

Percent (%) Electing Medicare Plans			
Medicare Plans All Divisions			
UnitedHealthcare MAPD PPO	75		
Kaiser Permanente Medicare Advantage HMO	25		

For those PERACare enrollees of the State, School, Local Government, and Judicial Divisions with a PERA benefit structure, who are assumed to be ineligible for premium-free Medicare Part A and participate in the UnitedHealthcare MAPD PPO plans, 73% are assumed to elect MA#1 and 27% are assumed to elect MA#2. These assumptions were updated effective as of the December 31, 2023, valuation date based on an experience analysis of recent data.

Per capita cost development

MAPD PPO #2 premiums are lower than the maximum service based plan subsidy upon retirement.

By statute, the maximum PERACare subsidy is the minimum of the plan premium and the calculated service based subsidy. To appropriately reflect this, the per capita costs are developed by plan option. This approach applies for all members and is adjusted accordingly for those not eligible for premium-free Medicare Part A.

MAPD PPO #1:

Based on January 1, 2024 premium rates for the UnitedHealthcare Medicare Advantage Prescription Drug (MAPD) PPO plan #1. Actuarial factors were then applied to estimate individual retiree and spouse costs by age and by gender and healthcare cost trend.

MAPD PPO #2:

Based on January 1, 2024 premium rates for the UnitedHealthcare Medicare Advantage Prescription Drug (MAPD) PPO plan #2. Actuarial factors were then applied to estimate individual retiree and spouse costs by age and by gender and healthcare cost trend.

MAPD HMO:

Based on January 1, 2024 premium rates for the Kaiser Permanente Medicare Advantage Prescription Drug (MAPD) HMO plan. Actuarial factors were then applied to estimate individual retiree and spouse costs by age and by gender and healthcare cost trend.

Please see page 96 for actual premium rates by plan and Medicare Part A status.

PERA benefit structure age related morbidity

For PERACare enrollees who are age 65 or older and who are either not eligible for premium-free Medicare Part A or where selected plan premium is lower than the service-based subsidy, per capita health care costs of the PERACare Medicare plans are adjusted to reflect expected health care cost changes related to age. The increase to the net incurred health care claims is assumed to be:

Participant Age	Annual Increase (Male)	Annual Increase (Female)
65 – 68	2.2%	2.3%
69	2.8	2.2
70	2.7	1.6
71	3.1	0.5
72	2.3	0.7
73	1.2	0.8
74	0.9	1.5
75-85	0.9	1.3
86 and Older	0.0	0.0

The Medicare Part A premium is not age adjusted, as Medicare is a pooled health plan in which premiums are neither age nor geography adjusted.

The service-based premium subsidy for health care does not result in annually increasing costs to the PERA benefit structure as a PERACare enrollee ages (except for the subsidy reduction at age 65, where selected plan premium is lower than the service-based subsidy or the costs associated with Medicare disability eligibility).

Segal utilizes valuation results for both funding and GASB purposes for Colorado PERA. GASB Statement No. 75 requires compliance with ASOP No. 6, which does allow exceptions to age adjustment in "some very limited cases" for pooled health plans, per Section 3.7.7.(c). Segal has generally taken the position of applying age adjustment within our retiree health valuation practice to Group Medicare Advantage and/or EGWP plans. In addition, Segal understands the PERACare Medicare Advantage plans are experience-rated vs. pooled plans.

Per capita health costs

Medical and prescription drug claims costs for the plan year beginning January 1, 2024 are shown in the table below for retirees at selected ages. These costs are net of deductibles and other benefit plan cost sharing provisions.

		PPO #1 care Part A		PPO #2 icare Part A		IO (Kaiser) care Part A
	Male	Female	Male	Female	Male	Female
65	\$1,710	\$1,420	\$585	\$486	\$1,897	\$1,575
70	\$1,921	\$1,589	\$657	\$544	\$2,130	\$1,763
75	\$2,122	\$1,670	\$726	\$571	\$2,353	\$1,853

		PPO #1 dicare Part A		PPO #2 edicare Part A		IO (Kaiser) dicare Part A
	Male	Female	Male	Female	Male	Female
65	\$6,536	\$5,429	\$4,241	\$3,523	\$7,063	\$5,866
70	\$7,341	\$6,073	\$4,764	\$3,941	\$7,933	\$6,563
75	\$8,110	\$6,385	\$5,262	\$4,143	\$8,763	\$6,900

The 2024 Medicare Part A Premium is \$505 per month.

PERA benefit structure health care cost trend rates

Year	PERACare Medicare Plans ⁽¹⁾ (%)	MAPD PPO #2 ⁽¹⁾ (%)	Medicare Part A Premiums (%)
2024	16.00	105.00	3.50
2025	6.75	8.55	3.75
2026	6.50	8.10	3.75
2027	6.25	7.65	4.00
2028	6.00	7.20	4.00
2029	5.75	6.75	4.25
2030	5.50	6.30	4.25
2031	5.25	5.85	4.25
2032	5.00	5.40	4.25
2033	4.75	4.95	4.50
2034	4.50	4.50	4.50

⁽¹⁾ Increase in 2024 trend rates due to effect of the Inflation Reduction Act.

The service-based premium subsidy is assumed to remain constant at its current level as of December 31, 2023; adjusted as appropriate to reflect statutory maximum levels where actual plan premium is lower.

Health care cost trend rates for the PERA benefit structure are based on published annual health care inflation surveys in conjunction with actual plan experience (if credible), building block models and industry methods developed by health plan actuaries and administrators. In addition, we reference projected trends for the Federal Hospital Insurance Trust Fund (Medicare Part A premiums) provided by the Centers for Medicare & Medicaid Services. PERACare Medicare Plan Rates are applied where members have no premium-free Part A and where those premiums are already exceeding the maximum subsidy. MAPD PPO#2 has a separate trend because the first year rate is still below the maximum subsidy and to reflect the estimated impact of the Inflation Reduction Act for that plan option.

HCTF dual status members and retirees

Some members and retirees may be represented under both the PERA benefit structure and the DPS benefit structure, and are considered as members or retirees in both benefit structures due to their dual status. In calculating the HCTF's liabilities for members with a liability under both the HCTF and the DPS HCTF, recognition is given to the choice of benefit structure, and the allocation of member contributions between the two HCTFs, as set forth in C.R.S. 24-51-1206.5. The choice of benefit structure is based upon what is assumed to be of the highest economic value to the benefit recipient. Current allocation percentages and member contribution account balances were provided by PERA for dual status members and retirees. For active members, member contribution account balances are projected assuming annual interest crediting of 3.00%, future salary increases of 3.00%, and member contributions of 11.00% of projected salary (for members other

than those of the Local Government Division and Safety Officers). For the Local Government Division, member contributions are 9.00% of projected salary. For Safety Officers, member contributions are 13.00% of projected salary.

Health care participation rates – applicable to the DPS benefit structure

Current PERACare enrollees of the State, School, Local Government, and Judicial Divisions with a DPS benefit structure are assumed to maintain their current health care benefit elections in perpetuity. For active members retiring directly from the State, School, Local Government, and Judicial Divisions with a DPS benefit structure, the following participation rates are assumed:

Attained Age(s) at Retirement	Percent Electing Health Care Coverage Rate (%)
15-48	20
49-50	25
51-52	35
53	40
54-60	50
61-64	60
65-71	55
72+	65

For deferred vested members of the State, School, Local Government, and Judicial Divisions with a DPS benefit structure, 20% are assumed to elect health care coverage upon commencement of their monthly benefit.

For spousal participation, actual census data and current plan elections of current benefit recipients are used. For spouses of eligible terminated vested members and future retirees of the State, School, Local Government, or Judicial Divisions with a PERA benefit structure, 60% of males and 35% of females are assumed to elect coverage for their spouse. The age difference between female retirees and covered male spouses is assumed to be 1 year (male older) and the age difference between male retirees and female spouses is assumed to be 3 years (male older).

DPS benefit structure assumptions specific to the "No Part A" subsidy

For those retirees who are age 65 or older and are not eligible for premium-free benefits under Medicare Part A, an additional, "No Part A" premium subsidy is paid under the DPS benefit structure.

For those current retirees who are age 65 and older, the premium-free Medicare Part A eligibility status is provided by PERA and is assumed to be maintained in perpetuity. For current retirees not yet age 65, hired prior to April 1, 1986, and not assumed eligible for premium-free Medicare Part A coverage through their spouse, and for those active employees hired prior to April 1, 1986, the following percentage of retirees are assumed to not qualify for premium-free Medicare Part A benefits; thus qualifying for the "No Part A" subsidy from the DPS benefit structure:

Hire Age	Percent (%) Qualifying for "No Part A" Subsidy
0-24	17
25-29	11
30+	4

The qualifying assumptions are based upon the experience of current, Medicare eligible, PERACare enrollees. Date of hire and hire age are estimated based upon service and date of retirement for current benefit recipients, or service and the valuation date for active members. As a result, those who are re-employed or transfer to another PERA employer may have accumulated the required quarters of Medicare-covered employment.

95% of members enrolled in PERACare as a result of disability retirement are assumed to qualify for premium-free Medicare Part A.

100% of deferred vested members receiving health care benefits are assumed to obtain the 40 or more quarters of Medicare-covered employment required for premium-free Medicare Part A coverage as a result of their subsequent employment.

DPS benefit structure additional premium subsidy

In determining the additional liability for retirees who are age 65 or older and who are not eligible for premium free Medicare Part A, the following, additional monthly costs are assumed:

Years of Service	Subsidy for Members without premium-free Medicare Part A
20+	\$115.00
19	109.25
18	103.50
17	97.75
16	92.00
15	86.25
14	80.50
13	74.75
12	69.00
11	63.25
10	57.50
9	51.75
8	46.00
7	40.25
6	34.50
5	28.75
4	23.00
3	17.25
2	11.50
1	5.75

The additional premium subsidy for retirees who are age 65 or older and who are not eligible for premium free Medicare Part A is assumed to remain constant at its current level.

DPS Benefit Structure Morbidity

The liabilities for medical and drug post-employment benefits are to be based, in most circumstances, on assumed claims costs that vary by age. This is generally accomplished using rates of morbidity, or, an aging curve, modeling the growth in assumed claims as a PERACare enrollee ages. Where the service-based premium subsidies for health care are less than the selected plan premiums, there are no annually increasing costs to the DPS benefit structure as a retiree ages; no morbidity assumptions are utilized in the determination of DPS benefit

structure liabilities. Where the actual premiums for the selected plan are less than the service-based premium subsidy, the morbidity assumptions on page 84 are applied accordingly; i.e. the 2024 Medicare Advantage #2 is lower than the service based subsidy.

DPS HCTF dual status members and retirees

Some members and retirees may be represented under both the PERA benefit structure and the DPS benefit structure, and are considered as members or retirees in both structures due to their dual status. In calculating the DPS HCTF's liabilities for members with a liability under both the HCTF and the DPS HCTF, recognition is given to the choice of benefit structure, and the allocation of member contributions between the two HCTFs, as set forth in C.R.S. 24-51-1206.5. The choice of benefit structure is based upon what is assumed to be of the highest economic value to the benefit recipient. Current allocation percentages and member contribution account balances were provided by PERA for dual status members and retirees. For active members, member contribution account balances are projected assuming annual interest crediting of 3.00%, future salary increases of 3.00%, and member contributions of 11.00% of projected salary (for members other than those of the Local Government Division and Safety Officers). For the Local Government Division, member contributions are 9.00% of projected salary. For Safety Officers, member contributions are 13.00% of projected salary.

Plan provisions

Development of plan liabilities was based on the substantive plan of benefits in effect as described in Exhibit II. Costs of dental and vision coverage were not included in this valuation since retirees and dependents pay the full costs for these coverages.

Health care reform

The Inflation Reduction Act (IRA) includes material benefit cost-sharing changes for 2025, most notably implementing a \$2,000 member out-of-pocket maximum, as well as various funding changes that are used to reduce premiums for Medicare prescription drug plans. Both changes are expected to significantly increase premiums for the plans covering Medicare eligible retirees. Our projections include an estimated impact of the IRA on the Fund's Medicare plans in calendar year 2025 based on preliminary information. Final guidance, rules, and clarifications will be provided by the Centers for Medicare & Medicaid Services in the summer of 2024.

Retiree contribution increase rate

Retiree and dependent contribution rates were assumed to increase at medical and prescription drug trend.

Exhibit II: Summary of plan provisions

This exhibit summarizes the major provisions of the Plan included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions. Eligibility to participate in PERACare and receive health care subsidy benefits is contingent on eligibility to retire under PERA. The retirement eligibility provisions are summarized in Segal's final December 31, 2023 pension actuarial valuation report.

Effective date Health Care Trust Fund (HCTF)

On July 1, 1985, employer contributions to the HCTF commenced. Plan coverage and premium subsidy payments began July 1, 1986.

Effective date DPS Health Care Trust Fund (DPS HCTF):

On January 1, 2010, as part of the merger, the liabilities and assets of the Denver Public Schools Retiree Health Benefit Trust were transferred into a newly created DPS HCTF and employer contributions from employers in the DPS Division commenced.

Affiliated employers

Affiliated employers include State agencies and institutions of higher education, political subdivisions of the state, all school districts, courts, and any other public entities which affiliate with PERA.

Covered members

Covered members include employees of Affiliated Employers who work in a position subject to membership and for whom contributions are made.

Employer contributions

The employer contribution rates of the State, School, Local Government, and Judicial Divisions include the contribution of 1.02% of PERA covered payroll allocated to the Health Care Trust Fund.

The employer contribution rate of the DPS Division includes the contribution of 1.02% of PERA covered payroll allocated to the DPS Health Care Trust Fund.

Eligibility for health care coverage

The HCTF includes assets for the purpose of paying premium subsidies on behalf of PERA Benefit Structure benefit recipients and DPS Benefit Structure retirees who worked for an employer in the State, School, Local Government, and Judicial Divisions within PERA who enroll in PERACare.

The DPS HCTF includes assets for the purpose of paying premium subsidies on behalf of PERA Benefit Structure benefit recipients and DPS Benefit Structure retirees who worked for employers of the DPS Division and who enroll in PERACare.

The following individuals are eligible to enroll in PERACare:

- Anyone receiving a monthly PERA benefit (benefit recipient). If the benefit recipient is enrolled in PERACare, the following dependents
 may be enrolled: spouses (including civil union partners recognized under Colorado law), domestic partners, unmarried dependent
 children under age 26, certain mentally or physically incapacitated adult children, and dependent parents.
- Guardians of children receiving PERA survivor benefits, if children are enrolled in PERACare.
- PERA retirees temporarily not receiving PERA benefits.
- Surviving spouses of deceased retirees who are not receiving PERA benefits but were enrolled in PERACare at the time when death occurred.
- Divorced spouses of retirees who are not receiving PERA benefits, but were enrolled in PERACare when the divorce occurred.
- Members while receiving short-term disability program payments.
- Members whose employers have elected to provide coverage through PERACare and dependents of such members.

Enrollment

Enrollment in PERACare is voluntary, with eligibility within 30 days of initial pension benefit payment, upon the occurrence of certain life events, and during an annual open enrollment for coverage effective each January 1. If a surviving spouse or divorced spouse discontinues coverage, re-enrollment is not allowed.

Premium subsidy

A monthly subsidy is allocated to each benefit recipient under the PERA Benefit Structure and each retiree under the DPS Benefit Structure electing health care coverage. Survivors of retirees under the PERA Benefit Structure are eligible to receive the subsidy. The following monthly amounts are based upon the benefit structure elected, date of retirement, Medicare eligibility, and/or credited service:

DPS Benefit Structure Retirees Who Retired Prior to July 1, 1994:

- \$230 per month for retirees without Medicare Part A
- \$115 per month for retirees with Medicare Part A

DPS Benefit Structure Retirees Who Retire On or After July 1, 1994:

- \$5.75 if age 65 or older and eligible for premium-free Medicare Part A.
- \$11.50 if not yet age 65, or if age 65 or older and not eligible for premium-free Medicare Part A.

The monthly amounts above are allocated per year of credited service up to a maximum of 20 years of service, not to exceed the premium for the health care coverage elected.

PERA Benefit Structure Benefit Recipients:

- \$5.75 if age 65 or older or eligible for Medicare Part B.
- \$11.50 if not yet age 65 or not eligible for Medicare Part B.

The monthly amounts above are allocated per year of credited service up to a maximum of 20 years of service, not to exceed the premium for the health care coverage elected.

Member contributions are the projected full cost of coverage less the premium subsidy. The full costs for claims, administration, premiums, etc., are allocated and paid by the HCTF and the DPS HCTF.

For those benefit recipients under the PERA Benefit Structure who are age 65 or older, the full cost of coverage is considered to be based on the full cost of coverage assuming eligibility for premium-free Medicare Part A. This is independent of actual eligibility for premium-free Medicare Part A.

Members not receiving a PERA monthly benefit do not qualify for this subsidy and bear the full cost of coverage.

This premium subsidy is only available to those enrolled in PERACare and meeting the requirements defined by the benefit structure under which they retire.

The premium subsidy cannot be applied to dental or vision premiums.

Pre-Medicare retirees contribute the full premium for medical and pharmacy benefits less the service based premium subsidy. Premiums were provided by Colorado PERA and are estimated to cover the full cost of benefits and administrative fees and are based upon group-specific pre-Medicare retiree experience; there is no blending with active nor Medicare members' experience. The average premiums for pre-Medicare members are well above the maximum fixed employer subsidy and any impacts for future health care cost trend or aging are the member's responsibility.

Special note on members not qualifying for Medicare Part A:

Under the PERA Benefit Structure, an implicit subsidy is paid for those members not eligible for premium-free Medicare Part A benefits. This amount is the difference in premiums charged for those without Medicare Part A and for those enrolled in Medicare Part A.

The DPS Benefit Structure pays an explicit subsidy for those members eligible to receive the premium subsidy and who are not eligible for premium-free Medicare Part A coverage. For these members an additional subsidy of \$5.75 per month for each year of credited service (up to a maximum of 20 years of service) is allocated.

Special note on premium subsidy funding for members in both the HCTF and the DPS HCTF:

For members covered under both the HCTF and the DPS HCTF, the allocation of the subsidy amounts is done via an allocation method set forth in C.R.S. 24- 51-1206.5.

Retiree contributions

Monthly contribution rates in effect on January 1, 2024 are shown in the table below.

	Retiree Only	Retiree Plus Spouse
UnitedHealthcare MAPD #1	\$152.00	\$304.00
UnitedHealthcare MAPD #2	\$52.00	\$104.00
Kaiser HMO	\$170.00	\$340.00

Denver Public Schools Retirees Without Premium-Free Medicare Part A*.

	Retiree Only	Retiree Plus Spouse
UnitedHealthcare MAPD #1	\$581.00	\$1,162.00
UnitedHealthcare MAPD #2	\$377.00	\$754.00
Kaiser HMO	\$633.00	\$1,266.00

^{*} Also used for PERA structure implicit subsidy for members without Premium-Free Medicare Part A

Exhibit III: Colorado PERA Defined Benefit OPEB Plan funding policy

I. Introduction

The Colorado Public Employees' Retirement Association (PERA) maintains two pre-funded defined benefit retiree health care subsidy plans [i.e., Health Care Trust Fund and Denver Public Schools (DPS) Health Care Trust Fund], classified as other postemployment benefit (OPEB) plans. The primary benefit provided by both OPEB plans is an insurance premium subsidy to eligible PERA retirees and benefit recipients enrolled in PERACare. Each defined benefit OPEB plan is funded through PERA-affiliated employer contributions, a portion of purchased service contributions transferred at the time of retirement, and the investment earnings resulting from those contributions. The fixed contribution rate at which each division's employers contribute is determined by the Colorado General Assembly and defined within the statutes governing PERA.

The purposes of this funding policy are to state the overall funding goals and annual actuarial metrics and to guide the PERA Board of Trustees (Board) when considering whether to pursue or support proposed contribution and benefit legislation. The policy also includes a brief list of governance responsibilities regarding the commissioning, collection, and review of actuarial information, as described in the Board's *Governance Manual*.

PERA also maintains five pre-funded, hybrid defined benefit pension plans (i.e., State Division Trust Fund, School Division Trust Fund, Local Government Division Trust Fund, Judicial Division Trust Fund, and DPS Division Trust Fund). On March 20, 2015, the Board approved a separate pension funding policy with regard to these plans.

It is the intention of the Board that this funding policy be considered a working document, reviewed periodically and, as necessary, altered in the future through formal action of the Board. The actual document contains their view and revision/adoption history pertaining to the funding policy of the PERA defined benefit OPEB plans.

II. Background

In response to the unfavorable investment market of 2008, and in addition to the funding policy adopted in November 2007, the Board set the following guiding principles in 2009 in the development of a comprehensive package to maintain long-term sustainability of the pension plans:

- Shared responsibility among members, retirees, and employers;
- Intergenerational equity;
- Preservation of the defined benefit plan;
- Preservation of portability through the maintenance of existing benefit structures for the different divisions; and
- Development of recommendations that would have little-to-no short-term impact on member behavior.

The combined funding policy regarding PERA's pension and OPEB plans, adopted by the Board in November 2007, was in force with regard to the OPEB plans through December 30, 2017. On January 19, 2018, the Board approved a separate OPEB funding policy with regard to these plans, which reflects the guiding principles listed above as applicable. This OPEB funding policy is effective with the

December 31, 2017 actuarial valuation, recognizes the adoption and implementation of the GASB Statement No. 74, applicable to OPEB, and has been adopted and updated as indicated on the last page of the document.

This document is revised as of January 19, 2024, with the purpose of updating PERA law references and incorporating any necessary clean-up language.

III. Funding Goals

- Preservation of the **defined benefit plan structure** of providing retirement health care premium subsidies and other benefits, as applicable to PERA retirees and benefit recipients.
- Demonstration of **transparency and accountability** through the continued maintenance of a defined benefit OPEB plan funding policy for the stakeholders of PERA.
- Achievement of a combined OPEB plan actuarial funded ratio greater than or equal to 110%. Once the 110% combined funded ratio is achieved, the Board will consider and/or support the following actions, as ordered, as long as the funded ratio, either combined or individual by fund, does not fall below 100% after consideration of the proposed change:
 - Examination and possible action of de-risking the OPEB plans, in parallel with the pension plans
 - o Reduction in the portion of the base contribution rate(s), designated for funding the OPEB plans
 - o Adoption of a benefit enhancement.
- If the 110% combined funded ratio benchmark is attained through the assistance of certain funding arrangements where assets, outside of statutory contributions, are added to the plans, and results in additional tax-payer obligation, the payment method and duration of this debt should be considered prior to any supportive action taken regarding benefit enhancements.
- Dedication to the balance between:
 - o Contribution rate stability keeping contributions relatively stable over time, and
 - o **Intergenerational equity** allocating costs over the employees' period of active service.
- Dedication to the systematic reduction of the unfunded actuarial accrued liabilities (UAAL).
- Recognition that within a multiple-employer cost-sharing defined benefit plan, such as the PERA HCTF, there are beneficial elements
 of pooled risk, both in the accrual of plan liabilities, recognizing actuarial gains and losses for the fund in total, rather than by each
 employer; and in the accumulation of plan assets through the engagement of an appropriate level of asset risk management.

IV. Annual Actuarial Metrics

Below is a list of actuarial metrics to be assessed on an **annual basis as of the actuarial valuation date**. The Board recognizes that a single year's results may not be indicative of long-term trends and projected results.

- Funded ratios- Calculate and review by fund:
 - The actuarial funded ratio based on the actuarial value of plan assets divided by the defined benefit OPEB plan's actuarial accrued liability (AAL), and

- o The market value funded ratio based on the market value of plan assets divided by the defined benefit OPEB plan's AAL.
- **Funding period** To be determined for each fund with respect to the applicable contribution rates. A funding period is the amortization period required to pay off that fund's UAAL considering the resources available. Funding periods for each fund will be determined in the annual actuarial valuation in relationship to both:
 - Statutory contribution rates, and
 - o Actuarially determined contribution (ADC) rates.
- Contribution rate comparison-
 - Calculate and review by fund.
- Actuarial Projections
 - o Perform and review, by fund,
 - Actuarial projections considering appropriate benefit provisions, salary and demographic data, actuarial
 assumptions, membership growth, and statutory contribution rates in order to determine the sustainability of each
 fund under their benefit provisions and statutory contribution rate structure.
 - Projection modeling that allows for the testing of projection results under various economic and demographic stress conditions.

V. Funding Valuation Elements

Annually, the Board's actuary will perform an actuarial valuation for funding purposes, and calculate ADC rates against which to compare contribution rates mandated under State statute. The ADC will be the sum of a payment based on normal cost and a payment on the UAAL. The normal cost and the amount of payment on the UAAL are determined by the following three major components of a funding valuation:

- Actuarial Cost Method: This component determines the attribution method upon which the cost/liability of the retirement benefits are allocated to a given period, defining the normal cost or annual accrual rate associated with the projected benefits.
 - The Entry Age Normal Cost Method (EAN), as is used for PERA's annual actuarial valuation purposes, is to be used for the determination of the normal cost rate and the actuarial accrued liability for purposes of calculating the ADC.
 - O Under this method, normal cost is calculated using benefits based on projected service and salary at retirement and is allocated over an individual's career as a level percent of payroll. Because EAN normal cost rates are level for each participant, the normal cost pattern for the entire plan under EAN is more stable in the face of demographic shifts in the workforce. It is this normal cost stability that makes the EAN method the preferred funding method for the majority of public defined benefit pension plans.
- **Asset Valuation Method:** This component dictates the method by which the asset value, used in the determination of the UAAL, is determined, which could be a market value or a smoothed actuarial value of trust assets.
 - Because investment markets are volatile and defined benefit OPEB plans typically have long investment horizons, application
 of an asset-smoothing technique can be an effective tool to manage contribution volatility and provide a more consistent
 measure of funding over time. Asset-smoothing methods reduce the effect of short-term market volatility on contributions,

- while still tracking the overall movement of the market value of plan assets, by recognizing the effects of investment gains and losses over a period of years.
- The asset valuation method to be used shall be a four-year smoothed market value of assets. The difference between actual market value investment returns and the expected actuarial investment returns is recognized equally over a four-year period.
- **Amortization Method:** This component prescribes, in terms of duration and pattern, the systematic manner in which the difference between the actuarial accrued liability and the actuarial value of assets is reduced.
 - Once established for any component of the UAAL, the amortization period for that component will be closed and will decrease by one year annually.
 - The amortization payment will be determined on a level percentage of pay basis.
 - The length of the amortization periods will be as follows:
 - Existing UAAL on December 31, 2017–30 years.
 - Any increase (or decrease) in the UAAL existing as of December 31, 2017–remaining period of the initial 30-year period from the date of the valuation.
 - Annual future actuarial experience gains and losses–30 years from the date of the valuation.
 - Future assumption changes–30 years from the date of the valuation.
 - Future benefit enhancements/reductions—the number of years, as determined by the Board, to represent the anticipated duration of payment of the enhancement or, if a reduction, duration of the benefit to the plan. This determination will be based on the nature of the benefit change and the demographics of the membership group affected by the change, not to exceed 25 years from the date of the valuation.
 - o If any future annual actuarial valuation indicates a fund has a negative UAAL, the ADC shall be set equal to the Normal Cost until such time as the funded ratio equals or exceed 120%. At that time, the ADC shall be equal to the Normal Cost less an amount equal to 15 year amortization of the portion of the negative UAAL above the 120% funded ratio.
 - The target amortization period noted above regarding new UAAL will be applied for funding benchmark and RSI reporting purposes. Alternative ADCs will be determined by fund, by applying the layered amortization methodology as described above, using a 25-year closed period, a 20-year closed period, and a 15-year closed period, in lieu of the 30-year period, for amortization of new UAAL. These comparatives are to appear in the Annual Comprehensive Financial Report (ACFR) as a demonstration of the transparency and accountability funding goal delineated in Section III of this document.

In conjunction with the three major components discussed above, a number of actuarial assumptions are used to develop the annual actuarial metrics, as well as the ADC rates, and are described in detail in the annual actuarial valuation report. The actuarial assumptions are derived and proposed by the Board's actuary and adopted by the PERA Board of Trustees in conformity with the *Actuarial Standards of Practice* issued by the Actuarial Standards Board. The assumptions represent the Board's best estimate of anticipated experience under the benefit provisions of PERA and are intended to be long-term in nature. In the development of actuarial assumptions, the Board considers not only past experience but also trends, external economic forces, and future demographic and economic expectations.

- Actuarial Assumptions- Actuarial assumptions are generally grouped into two major categories:
 - o **Demographic assumptions,** which include rates of termination, retirement, disability, and mortality, and benefit utilization and coverage elections, etc., and

o **Economic assumptions,** which include investment return, salary increase, payroll growth, inflation, and health care cost trend and morbidity, etc.

Actuarial assumptions do not impact the total cost of the plan (benefit payments and expenses), but rather the timing of prescribed contributions. To the extent that actuarial experience deviates from the assumptions, and actual contributions deviate from projected, experience gains and losses will occur. These gains (or losses) then serve to reduce (or increase) the projected future contributions necessary to achieve or sustain a certain actuarial standard. It is in this vein that the ADC rates may help indicate if the statutory contribution rates are adequate to meet the future cost requirements of the plan, although the ADC calculated in valuation results has limitations due to changing costs over time. Considering the extended period until the entire plan population has Medicare Part A coverage under the PERA Health Care Trust Fund, the results of the actuarial projections may provide a better indication of the adequacy of the statutorily prescribed OPEB contribution schedule.

VI. Governance Policy/Processes

As delineated in the **PERA** *Governance Manual*, below is a list of specific actuarial and/or funding-related studies, the frequency at which they should be commissioned/requested by the Board, and additional responsibilities relating to the studies:

- Actuarial Valuation (perform annually)-The Board is responsible for reviewing PERA's annual actuarial valuation report; and submitting a summary report to the Legislative Audit Committee and the Joint Budget Committee of the General Assembly, together with any recommendations concerning such liabilities that have accrued. In addition, the Board, in consultation with its retained actuary, will provide recommendations to the Colorado General Assembly regarding any necessary adjustments to the statutory employer contribution rates.
- **Experience Analysis** (perform at least every five years, typically performed every four years)- The Board is responsible for ensuring that an experience analysis is performed as prescribed, for reviewing the results of that study, and for approving the actuarial assumptions and methodologies to be used for all actuarial purposes relating to the defined benefit pension and OPEB plans.
- **Actuarial Audit** (perform at least every five years, or the appointment of a new actuarial firm will satisfy requirement)-The Board is responsible for ensuring that an actuarial audit is performed as prescribed and for reviewing the results of that audit.
- Asset Liability Study (perform at least every three to five years, or more frequently if necessary)- The Board is responsible for
 ensuring that a study of the relationship between the defined benefit trust assets and liabilities is performed as prescribed and for
 reviewing the results of that study.
- Review of the **Defined Benefit Pension Plan Funding Policy and the Defined Benefit OPEB Plan Funding Policy** (perform every five years)-The Board is responsible for the periodic review of the funding policies applicable to the defined benefit pension and OPEB plans, as is deemed necessary.

VII. Glossary of Funding Policy Terms

- Actuarial Accrued Liability (AAL): The AAL is the value at a particular point in time of all past normal costs. This is the amount of assets the plan would have today if the current plan provisions, actuarial assumptions, and participant data had always been in effect, contributions equal to the normal cost had been made, and all actuarial assumptions had been met.
- Actuarial Cost Method: The actuarial cost method allocates a portion of the total cost (present value of benefits) to each year of service, both past service and future service.
- Asset Values:
 - Actuarial Value of Assets (AVA): The AVA is the market value of assets less the deferred investment gains or losses not
 yet recognized by the asset smoothing method.
 - Market Value of Assets (MVA): The MVA is the fair value of assets of the plan as reported in the plan's audited financial statements.
- Entry Age Normal Actuarial Cost Method (EAN): The EAN actuarial cost method is a funding method that calculates the normal cost as a level percentage of pay or level dollar amount over the working lifetime of the plan's members.
- Funded Ratio: The funded ratio is the ratio of the plan assets to the plan's actuarial accrued liabilities.
 - Actuarial Value Funded Ratio: is the ratio of the AVA to the AAL.
 - o Market Value Funded Ratio: is the ratio of the MVA to the AAL.
- Normal Cost: The normal cost is the cost allocated under the actuarial cost method to each year of active member service.
- **Present Value of Benefits (PVB) or total cost:** The PVB is the value at a particular point in time of all projected future benefit payments for current plan members
- Surplus: A surplus refers to the positive difference, if any, between the AVA and the AAL.
- Unfunded Actuarial Accrued Liability (UAAL): The UAAL is the portion of the AAL that is not currently covered by the AVA as of the annual valuation date.
- Valuation Date: The valuation date is the annual date upon which the trust assets and liabilities of the plan are valued and the actuarial valuation is performed. PERA's annual valuation date is December 31st.
